PROFESSIONAL SUMMARY

Data & AI Engineer | SQL, Python, dbt & Airflow | Pipelines, Warehousing & Applied AI

Data and AI engineer with around 2.5 years across data engineering, analytics, and applied AI. I own problems end to end, from raw data ingestion through ETL/ELT pipelines and dbt models to dashboards and AI products that stakeholders use to make decisions. Strong in SQL, Python, dbt, Airflow, cloud warehouses, and BI, plus hands-on LLM, RAG, and agent work, with a focus on data quality, reliability, and honest, well-tested systems.

TECHNICAL SKILLS

Languages & Query: Python (Pandas, NumPy), SQL (Query Optimization), PySpark, Bash

Data Engineering: ETL/ELT, dbt, Apache Airflow, Data Modeling, Star-Schema / Dimensional Modeling, Data Quality & Validation, CI/CD (GitHub Actions)

Warehouses & Cloud: BigQuery, Snowflake, Databricks, PostgreSQL, GCP, AWS, Docker

BI & Analytics: Power BI, Tableau, Dashboards, KPI Reporting, EDA, Correlation Analysis

AI & ML: LLMs, RAG, AI Agents, pgvector, scikit-learn, Model Distillation, FastAPI, REST APIs, AI-Assisted Development (Claude, Cursor)

PROFESSIONAL EXPERIENCE

SPM Strategic Feb 2026 – Present

Data Engineer *San Jose, CA*

- Built and maintained ETL/ELT pipelines and dbt models moving Oracle POS data into a BigQuery warehouse, with data-quality checks for reliable reporting.
- Developed AI-assisted analytics tools over live warehouse data and automated recurring reporting, cutting reporting turnaround from days to near real-time.

VeraAI Technologies Aug 2025 – Dec 2025

Backend Developer Intern – Data & Analytics *San Jose, CA*

- Built Python and FastAPI pipelines that extracted structured data from different types of unstructured vendor catalogs (text, tables, scanned PDFs) for a production AI product.
- Added validation and testing that raised data completeness from 85% to 97% with a 95% pass rate, and designed a transaction ledger that cut data inconsistencies by about 40%.

Net Orbit Inc. Jul 2022 – Dec 2023

Data Analyst *Hyderabad, India*

- Built ETL/ELT pipelines from ERP and source systems with dimensional data modeling and quality checks, cutting report turnaround time by 30%.
- Delivered 15+ Power BI and Tableau dashboards and automated reporting, reducing manual effort by 60% and improving process efficiency by 15%.

PROJECTS

Deep Signal – AI News Analyst *Python, FastAPI, LLMs, RAG, pgvector*

`github.com/saigautam9/news-agent-ai` `Live: deep-signal-mu.vercel.app`

- Built an automated multi-agent LLM pipeline (fetch, analyze, classify, map impact, find precedent, verdict) with a RAG layer on Postgres and pgvector over a growing archive of 2,000+ analyzed stories.
- Distilled a large teacher LLM into a fast offline classifier (85% desk accuracy, zero API calls) and benchmarked a topic classifier at 92.3% on 120,000 articles, with confidence tied to real precedent to keep the AI honest.

Thrilochana – iOS App (Live on the App Store) *FastAPI, Vertex AI, pgvector, GCP Cloud Run*

`apps.apple.com/us/app/thrilochana/id6759315151`

- Built and shipped a published iOS app that extracts and organizes information from invoices and documents using AI and vector embeddings.
- Deployed FastAPI services on GCP Cloud Run with pgvector and Vertex AI embeddings for reliable document processing.

Multi-Agent Text-to-SQL *Python, CrewAI, LoRA, Mistral-7B, SQL*

`github.com/saigautam9/DATA-266-Text2SQL`

- Built a tool that converts plain-English questions into SQL so non-technical users can query a warehouse, cutting query time from 15 minutes to under 3.
- Developed an automated evaluation harness that lifted exact-match accuracy from 0 to 80% and execution accuracy from 54% to 85%.

NYT Cloud Data Warehouse Pipeline *dbt, Airflow, BigQuery, SQL*

`github.com/saigautam9/NYT-Cloud-Data-Engineering-Pipeline`

- Built idempotent Airflow jobs that ingest 100K+ records and transform them with dbt into a star-schema BigQuery warehouse through reusable SQL models.
- Added dbt tests, a UTC-to-PST macro, and documentation, reducing manual reconciliation by about 35%.

Healthcare Data Platform *Python, SQL, Cloud Warehouse*

`github.com/saigautam9/generative-ai-healthcare-data-platform`

- Built a pipeline that ingests and transforms healthcare records into clean, query-ready tables for analytics and downstream AI use.
- Applied validation and standardization to keep the datasets reliable and consistent for reporting and modeling.

Loan Default Risk Analysis *Python, Pandas, Seaborn, Power BI, Tableau*

- Analyzed 300,000+ loan applications with cleaning, IQR outlier treatment, and univariate-to-multivariate and correlation analysis to find default drivers.
- Surfaced credit score, debt-to-income ratio, prior defaults, and loan amount as top risk indicators, delivering 10+ visualizations and interactive Power BI / Tableau dashboards.

Financial Data Streaming Pipeline *Python, Time-Series, Grafana*

- Built a pipeline that ingests and processes financial time-series data in rolling windows, feeding an LSTM forecasting model (RMSE 6.64).
- Containerized the pipeline with Docker and surfaced results through 8 Grafana dashboards with monitoring.

FIFA Player Analytics on Spark *PySpark, Spark MLlib*

- Built a PySpark pipeline processing player data with 19+ engineered features and a distributed Random Forest model, reaching 82% accuracy and 0.81 F1.
- Ran distributed feature engineering and tuning to scale the pipeline across partitions.

EDUCATION

San Jose State University Jan 2024 – Dec 2025

Master of Science, Applied Data Intelligence *San Jose, CA*

Relevant Coursework: Data Modeling & Warehousing, Big Data Technologies, Distributed Systems, Statistical Analysis, Machine Learning, Generative AI & LLMs

Vardhaman College of Engineering Aug 2018 – Jul 2022

Bachelor of Technology, Mechanical Engineering *Hyderabad, India*
