San Jose, CA | +1 (669) 223-8655 | kvnsaigautam@gmail.com | linkedin.com/in/saigautamk | github.com/saigautam9

TECHNICAL SKILLS

Data Platforms: Databricks, Microsoft Fabric (Lakehouse, OneLake, Data Factory), Delta Lake / Delta Tables, Apache Spark, Lakehouse Architecture, Semantic Models

Languages & Pipelines: Python (Pandas, PySpark), SQL, ETL/ELT, Data Ingestion & Integration, API-Based Pipelines, Automation, Orchestration (Airflow)

Data & Modeling: Data Modeling, Structured & Semi-Structured Data, Star-Schema, Incremental Processing, Data Quality & Validation, dbt

Governance & Security: Unity Catalog, OneLake Security, Microsoft Entra ID (RBAC), Private Endpoints, Data Lineage, Role-Based Access Control

Cloud, Integration & BI: Azure, GCP (BigQuery), AWS, Fivetran, Docker, Git, Power BI, Tableau, Dashboards & KPIs, Linux

AI & Automation: LLMs, AI Agents, RAG, AI-Assisted Development (Claude, Cursor), Feature Engineering

PROFESSIONAL EXPERIENCE

SPM Strategic LLC Feb 2026 – Present
Data Engineer *San Jose, CA*

- Automated data pipelines for a retail client that integrated sales, order-management, inventory, and waste-management data into a centralized analytics environment.
- Integrated retail source-system data with Fivetran ingestion pipelines, then built automated ETL in Python, SQL, Databricks, and Microsoft Fabric with incremental Delta-table processing to clean, transform, and validate the data.
- Built revenue and order-management dashboards tracking total revenue, average order value, product performance, order volume, margins, and store-level trends, reducing reporting turnaround time by about 25%.
- Developed waste-management analytics that pinpointed high-waste products and operations, cutting waste-related losses by about 15%, and governed access with Unity Catalog, Entra ID role-based permissions, and private endpoints for secure connectivity.

VeraAI Technologies Aug 2025 – Dec 2025
Data & Analytics Engineer (Backend) *San Jose, CA*

- Built a centralized analytics solution in Microsoft Fabric, using Fabric Lakehouse and OneLake to consolidate structured business, product-catalog, and material data.
- Developed Data Factory pipelines to ingest and automate data movement from multiple sources, and used Databricks and Spark with Delta tables to clean, transform, join, aggregate, and validate large catalog and operational datasets with incremental processing.
- Built Power BI dashboards in Fabric with semantic models (relationships, measures, KPIs) analyzing material usage, product categories, catalog activity, and revenue, reducing manual reporting effort by about 25%.
- Configured OneLake security and role-based access, and used Unity Catalog for table/schema permissions and data lineage across Databricks and Fabric; integrated external sources with Fivetran and secured connectivity with Entra ID and private endpoints.

Net Orbit Inc. Jul 2022 – Dec 2023
Data Analyst *Hyderabad, India*

- Built ETL/ELT pipelines from ERP and source systems with dimensional data modeling and quality checks, tuning SQL and cutting report turnaround by 30%.
- Delivered 15+ Power BI and Tableau dashboards and automated reporting for stakeholders, reducing manual effort by 60% and improving process efficiency by 15%.

PROJECT EXPERIENCE

Manufacturing Analytics Lakehouse (GitHub) *Azure Databricks, Delta Lake, Unity Catalog, Fabric, Power BI, MLflow*

- Built an end-to-end manufacturing analytics platform: ingested production/MES, sensor telemetry, and quality data (about 2M rows across 50 machines) through a bronze/silver/gold medallion architecture on Azure Databricks with PySpark and Delta Lake, governed in Unity Catalog.
- Engineered advanced transforms including window functions (rolling OEE, downtime), SCD Type 2 via Delta MERGE, incremental upserts, and quality gates, computing plant KPIs like OEE, downtime by loss category, and scrap rate.
- Trained a Random Forest failure-prediction model (0.93 cross-validated AUC, MLflow-tracked) for predictive maintenance, then served the gold layer into a Microsoft Fabric Lakehouse (OneLake) as Delta tables behind a 6-visual Power BI Direct Lake dashboard.

Loan Default Risk Analysis *Python, SQL, Power BI, Tableau*

- Analyzed 300,000+ records across structured and semi-structured data with cleaning and correlation analysis to identify default drivers.
- Delivered 10+ visualizations and interactive dashboards translating findings into actionable business recommendations.

EDUCATION

San Jose State University Jan 2024 – Dec 2025
Master of Science, Applied Data Intelligence *San Jose, CA*

Relevant Coursework: Data Modeling & Warehousing, Big Data Technologies, Distributed Systems, Cloud Data Platforms, Machine Learning
